

Our Commitment: Total Customer Satisfaction

IRI offers total customer satisfaction through:

Fully integrated capabilities, from hauling to metal recovery and treatment

The most competitive prices for production rejects, scrap and excess materials

Professional and trained personnel who practice safe and responsible processes in handling scrap materials, while ensuring the security of clients' materials

Capability for local and worldwide pick-up, transport and handling, using reliable international shipping and forwarding companies to ensure safe delivery of goods

Security through a CCTV system that monitors the movement of materials. The system is capable of storing data on activities up to a month and retaining the information for a period of two to three months.

Tight security is also provided within the plant as well as during transport through security personnel.

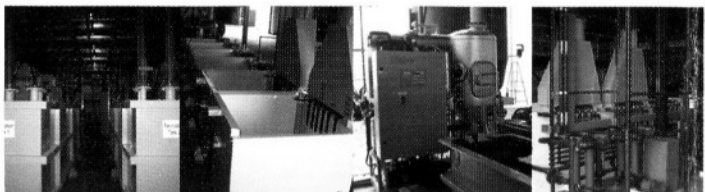

Protection of proprietary intellectual products with the guarantee that all production rejects are processed only for non-ferrous and precious metal recovery. Also in place are procedures to protect confidential information, satisfy traceability requirements, and ensure accountability.

Ideal location, that is, close to the center of its main clientele, the semiconductor and electronic industries. Its 12,000 sq. m. property is nestled in a premiere industrial park which has a centralized wastewater treatment facility, dedicated power supply, tight security systems, and excellent infrastructure.

Environmentally safe processes as supported by the necessary permits and licenses issued by the government to ensure environmental protection, namely:

- Environmental Compliance Certificates
- Philippine Economic Zone Authority (PEZA) Registration
- Laguna Lake Development Authority (LLDA) Clearance
- Accreditation by the Department of Environment and Natural Resources (DENR) as hazardous waste transporter, storage, and disposal facility
- Permit to Operate Air Pollution Source and Control Installations (for crushing machines)

In 2005, IRI will seek OHSAS 18000 accreditation.
